

In 2004, in response to the nuisance tagging of public property by graffiti vandals, the City of Victoria Engineering Department implemented a program to install decorative wraps to its above ground kiosks and cabinets. These cabinets house critical electrical and traffic signal components and had long been a prime target for graffiti vandals.

The wraps, constructed of a durable vinyl with an anti graffiti coating, feature a variety of art work. The traffic control cabinets, located within the town core, feature a stylized map of the City with a “your are here” feature to aid visitors in finding their way around town.

Since this program began, the instances of repeat tagging has dropped significantly.

For more information on this program, please contact the City at 361-0456.
